Fuzion ProgramWorks™

The governance layer for capital programs.

PRODUCT OVERVIEW PROGRAM GOVERNANCE PLATFORM / PRIVATE TENANT OR SAAS

WHAT IT IS

ProgramWorks sits above the schedule, cost, and content systems you already run and turns project controls into a governed, auditable operating system. A project's category - scored on weighted complexity criteria at setup - decides which plans, KPIs, gates, and meetings apply, so the right governance is provisioned automatically instead of assembled by hand. From there, KPI variances raise barriers, barriers raise actions, and a rules-based escalation engine moves them by severity and duration rather than by judgment call. Built M365-native and deployable inside your own Microsoft tenant for programs where data sovereignty is non-negotiable.

WHAT IT DOES

- **Project Setup & Categorization**
  Weighted complexity scoring auto-provisions the correct document set, KPI slate, WBS, and meeting cadence for every project.
- **KPI Monitoring & Response**
  Earned-value review with variance narrative, linked barriers, and actions - so a slipping metric becomes a governed response, not a slide.
- **Barriers, Actions & Escalation**
  Rules-based escalation keyed to severity and duration, configurable as data, not code.
- **Phase Gates & Compliance**
  G0-G5 gate governance plus a NERC CIP compliance gate, with live status across the program.
- **SLA & Meeting Governance**
  Planned vs. actual support tracking, gap analysis, and meeting attendance tied to KPIs and actions.
- **Risk & Change**
  5x5 risk heat map with Monte Carlo simulation, and change control that auto-raises a barrier on adverse approved change.
- **AI Insights (planned)**
  Predictive escalation, forecast-accuracy scoring, and anomaly detection on governed data.
- **Integrations**
  Primavera P6, EcoSys, OpenText Content Server, SAP, Maximo, Power BI, FieldWorks, and ProjectWorks.

  Integrations are configured for each client during implementation; connector scope is confirmed in your statement of work.

WHERE IT FITS IN THE WORKS SUITE

FieldWorks runs the field. ProjectWorks plans and forecasts. ProgramWorks governs.

One platform, one data model, and handshakes that carry a field change order through cost impact to a governed, escalated barrier.

Primavera P6 SCHEDULE	EcoSys COST	OpenText CONTENT	SAP SCOPED PER CLIENT
Maximo SCOPED PER CLIENT	Power BI SCOPED PER CLIENT	FieldWorks SUITE	ProjectWorks SUITE

Integrations are configured for each client during implementation; connector scope is confirmed in your statement of work.

DEPLOYMENT & OFFERING

SaaS

Hosted and managed by Fuzion in a secure Microsoft environment. Fastest path to production.

Private Tenant

Deployed inside your Microsoft tenant. Your data, your perimeter, and your IT governance.

Commercial, GCC & GCC High

Available for Commercial, GCC, or GCC High on Azure Government where data sovereignty is non-negotiable.

Governance as Data

Categories, KPI slates, gates, escalation rules, and meeting cadences are configured as data, not code.

BUILT FOR

- Nuclear Generation
- Utilities & Transmission
- Government Programs
- EPC & Heavy Construction
- Energy, Gas & Oil
- Infrastructure & Civil
- Public Sector & Tribal
- Mining

BUILT BY

The Fuzion Companies™ family's senior leaders and support staff bring 110+ years of combined professional experience. This includes 35+ years of business and technology consulting experience within Fuzion Consulting Group™'s core leadership.

NEXT STEPS

Talk to a consultant.

Bring your program lead. We will walk through complexity-scored setup, the KPI-to-barrier-to-action pipeline, gate governance, and the escalation engine - and map how ProgramWorks governs the systems your program already runs on.
